State records are used in
Application Engines as a
storage location for data

Access PDF Application Engine State Record

that needs to be passed across actions. An Application Engine can have more than one state records (a maximum of 200) associated with it out of which only one can be marked as a default state record.

PeopleSoft State Record - PSoftSearch

A Application Engine state record must have a process instance defined as the first field and the only key field, and the state record

Access PDF Application Engine State Record

name must end with `_AET`. Not all the database columns referenced in your program must be in the state record, just the columns that must be selected into memory so those values can be referenced in a subsequent

Access PDF Application Engine State Record

program action.

Using State Records - Oracle

State records are used in Application Engine programs to keep track of useful information through the life of a program. PeopleSoft

Access PDF Application Engine State Record

uses the concept of a record (table) to store this information. The scope of data in a state record is global to an application engine program (and other programs that share the state record). The naming

Access PDF Application Engine State Record

convention of state records is to end with the suffix `_AET`. They can either be a derived/work record or a SQL table.

**State Records | PeopleSoft
Wiki**

Access PDF Application Engine State Record

A state record is a PeopleSoft record that must be created and maintained by the Application Engine developer. This record defines the fields a program uses to pass values from one action to another. Think of

Access PDF Application Engine State Record

the fields of the
Application Engine state
record as the working
storage for your Application
Engine program.

Understanding PeopleSoft Application Engine

Access PDF Application Engine State Record

State Record: 1. The record that ends with '_AET' is identified as State Record. 2. Used in Application Engine program. 3. As name itself says 'state' meaning we get to know the state of data (snapshot) that is

Access PDF Application Engine State Record

passed through the program.

Basics in PeopleSoft: Application Engine: State Record

A state record is a
PeopleSoft record object
that contains one or fields

Access PDF Application Engine State Record

used by the program to pass values between steps and actions. Essentially it is a work record for your application to store common variables that can then be used throughout the program. A state record can either be

Access PDF Application Engine State Record

a database table or a
PeopleSoft work record.

Application Engine | PeopleSoft Wiki

You can think of the state
record as the record of
assigned variables that

Access PDF Application Engine State Record

exists for an single instance of an application engine execution process. Each execution will have its own record and can be unique to that process run. A state record is passed variables from the process request

Access PDF Application Engine State Record

record commonly called the
Run Control.

Doug's Developer Toolbox: The PeopleSoft State Records and . . .

We use a State Record to
keep data accessible across

Access PDF Application Engine State Record

Actions. We can have many State Records for an App Engine. Do you know if we can have an App Engine that does not have a State Record? « Set Processing in App Engine » App Engine without Main Section

Access PDF Application Engine State Record

App Engine without State Record? | PeopleSoft Interview ...

Within an Application Engine program we populate a state record (AET table) with values. The first time we

Acces PDF Application Engine State Record

use these values (i.e. retrieve them using %Bind (<fieldname>)) the values are retrieved successfully, however when we attempt to use the values a second time they are empty/blank.

Once you have the state
record saved, you need to
connect it to the App Engine

Access PDF Application Engine State Record

program. To do so, open the App Engine properties and go to the State Record tab. Enter the name of the state record in the search box, click the "Get List" button, select the record in the "Record List", and finally

Acces PDF Application Engine State Record

click the "Add" button.

Basic Steps to Create an Application Engine in PeopleSoft ...

1) Should be either Derived
work record Or SQL Table. 2)
Name of the record must end

Access PDF Application Engine State Record

with `_AET`; this is how the system identifies the record as a state record. 3) `PROCESS_INSTANCE` must be a key. 4) Any data types except character or numeric must not be required fields.

Acces PDF Application Engine State Record

PeopleSoft: Application Engine Interview Question

`%SelectInit` or `%Select`
`%Select ()` and `%SelectInit`
`()` both are used to push
values into a state record
in an application engine
program. Both of them works

Acces PDF Application Engine State Record

in the same way, when the select statement is retrieving any row of data, but when the "select statement associated is not retrieving any row of data " they works in a different manner.

Access PDF Application Engine State Record

Peoplesoft Beginner:

%SelectInit or %Select

A state record is a PeopleSoft record that must be created and maintained by the Application Engine developer. Working storage
