The General Electric Passport is a turbofan developed by GE Aviation for large business jets. It was selected in 2010 to power the Bombardier Global 7500/8000, first ran on June 24, 2013 and first flew in 2015. It was certified in April 2016 and powered the Global 7500 first flight on November 4, 2016, before its 2018 introduction. It produces 14,000 to 20,000 lbf of thrust, a range previously covered by the General Electric CF34. A smaller scaled CFM LEAP, it is a twin-spool axial engine with a

General Electric Passport - Wikipedia

GE Aviation is committed to providing leading propulsion systems for business and general aviation (B&GA) customers around the world. We provide jet engines for small and large cabin business aviation aircraft and turboprop engines for B&GA operators.

CF34-8 - Fan Blade Pin Lubrication Maintenance Highlights ...

The General Electric J47 turbojet (GE company designation TG-190) was developed by General Electric from its earlier J35. It first flew in May 1948. The J47 was the first axial-flow turbojet approved for commercial use in the United States. It was used in many types of aircraft, and more than 30,000 were manufactured before production ceased in 1956.
