Troubleshooting Guide

Before any evaluation of the controls, regulator or generator can proceed, the Onan engine must have oil and fuel, be in running condition and the 12-volt battery charged. The electronic governor, 151-0752, on Models BGM and NHM, Spec B and later, must be functioning properly. This guide does not cover engine maintenance and repair procedures

RV GENERATOR TROUBLESHOOTING GUIDE

Check the fuel levels. If your Onan generator isn't running, it may be because fuel levels are too low. While some RV generators will run until the fuel tank has nothing but fumes, the Onan models tend to stop working when you're down to a quarter tank. The units that do this are the ones drawing from the gas tank.

Onan Generator Troubleshooting; 13 Tips For RV Generator

Each Cummins Generator has a model/spec number description, which is shown on the serial number tag attached to the generator. Here is a representation of the tag on Onan QG 4000. Note the highlighted letter code, in this case P, which denotes the specification type of the particular generator, which can then be referred to as spec P.

RV Generator Manuals | Cummins Inc.

Defective Control Board. As soon as the Onan power generator is up and running, use the multimeter to check the AC output voltages. If there is no AC, proceed to check the field flash voltage through the field flash pin of the board. In the case field flash voltage is not present, the control board may be defective.

Onan Generator Starts Then Shuts Down: Troubleshooting The ...

Onan RV Generator Troubleshooting. The first step in fixing Onan RV generators is troubleshooting. Here are some of the things you can check on your own. Make sure to try these things before paying a professional, as this could save you quite a bit of money. Begin by checking the fuel level. These generators pull fuel from the motorhome tank through a tube.

Read the manual and check the equipment. Most problems with generators occur from improper use. Read the owner's manual carefully and ensure that the generator has been set up correctly. Make sure the tank is full. An empty tank is a somewhat obvious but still often overlooked first step. Check to make sure there are no leaks in the tank.
