gizmo answer key student exploration ray tracing lenses ... Recall the class activity using the ray boxes and lenses. You found that a double convex (converging) lens made parallel rays of light meet at a certain point past the lens called the focal point. A double concave (diverging) lens made parallel rays of light spread out, but the extended rays appeared to come from a point called the focal point.

Students can see how lenses focus objects using the Ray Tracing (Lenses) Gizmo. In this Gizmo, students learn how the image of a candle is formed on the opposite side of a lens. By adjusting the position of the candle and the shape of the lens, students see how these factors affect the size and position of the image.
