The riveting history of a beautiful queen, a shocking murder, a papal trial -- and a reign as triumphant as any in the Middle Ages. On March 15, 1348, twenty-two-year-old Joanna I, Queen of Naples, stood trial for the murder of her husband before the Pope and his court in Avignon. Determined to defend herself, Joanna won her acquittal against overwhelming odds. Victorious, she returned to Naples and ruled over one of Europe's most prestigious courts for the next three decades -- until she herself was killed. Courageous and determined, Joanna was the only female monarch in her time to rule in her own name. She was widely admired: dedicated to the welfare of her subjects, she reduced crime, built hospitals and churches, and encouraged the licensing of female physicians. A procession of the most important artists and writers of the time frequented her glittering court. But she never quite escaped the stain of her husband's death, and the turmoil of the times surrounded her -- war, plague, and treachery would ultimately be her undoing. With skill, passion, and impeccable research and detail, Nancy Goldstone brings to life one of history's most remarkable women. The Lady Queen is a captivating portrait of medieval royalty in all its incandescent complexity.

3 books in 1 Boxset This boxset includes 3 manuscripts: the most powerful collection of books on Overthinking. Do you ever think you could reprogram your brain, just like a hacker would reprogram a computer? Have you found it difficult to hold your emotions in check especially in stress situations? The hypersensitivity of the immune system causes allergies. Asthma is one such example. It is a long-term inflammatory disease of the airways of the lungs, which is characterized by bronchospasm and reversible airflow obstruction. Some of the signs and symptoms of asthma are coughing, shortness of breath, wheezing and chest tightness. It is believed to be caused by a combination of environmental and genetic conditions. Environmental factors such as exposure to allergens and air pollution can trigger asthma. The diagnosis of asthma is based on an examination of symptoms and response to therapy and spirometry. There is no known cure for asthma. Triggers such as irritants and allergens can be avoided and managed by inhaling corticosteroids. For uncontrolled symptoms, antileukotriene agents and long-acting beta agonists may also be used. This book is a compilation of chapters that discuss the most vital concepts and emerging trends in the diagnosis and treatment of asthma. The various studies that are constantly contributing towards advancing the understanding of this disease are examined in detail. This book, with its detailed analyses and data, will prove immensely beneficial to professionals and students involved in this area at various levels.
